

Monitor anything,
from *anywhere*.

A Product of TOCCATA

Remote monitoring for *everyone*.

ABOUT US

Toccata Inc. is the Saskatchewan company behind Canaro. Founded in 2022, we're a full stack technology company, designing and manufacturing our products from the ground-up.

Canaro is equipped to support a huge variety of applications with its built-in sensor suite and scalable Add-Ons.

Built for operators; **not engineers**

The Canaro dashboard gives you a live view of every sensor across your fleet; its responsive design works seamlessly on desktop, tablet, and mobile - so you're always in control.

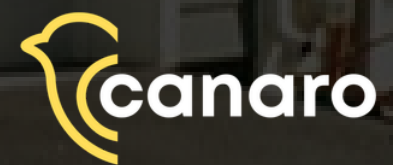

With a plug-and-play setup and simple user interface, Canaro is built for anyone to use, with no specialized training required.

Plus, our context-aware AI, Interlude, gives you a 24/7 data analyst - always monitoring, running predictions and catching problems before they matter.

Welcome to Canaro

monitoring made simple.

01

DEVICES

Plug in the hub and start monitoring instantly. Expand what you monitor and where with Add-Ons up to 10km away from the hub. When you need to move the device, simply **Shelve** the unit and it will be reset for the next location.

02

CONNECTIVITY

WiFi, cellular, and satellite. Canaro works almost anywhere with automatic failover. **No network setup required**, it works out of the box.

03

DATA INTELLIGENCE

Every device feeds into one dashboard. Name your devices, add and label additional sensors and gain insights; your dashboard grows with you.

Always stay connected
with **automatic fallback.**

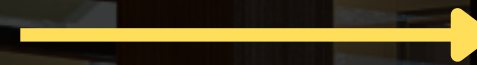

Connects to 550+ cellular networks worldwide, including SaskTel, Telus, Rogers, Bell and Videotron in Canada. Plus, global satellite coverage from the Skylo network.

Our Devices

Canaro is more than just an always-connected sensor gateway. It's an all-in-one monitoring system in its own right, with a suite of built-in sensors monitoring temperature, humidity, air quality, power status, noise, vibration and more.

Users can set **custom ranges** for alerts so when data falls outside the normal threshold, the selected contacts will be notified. (Can have up to 24 individual contacts/device)

10km

Monitoring can be expanded beyond the basics at any time by linking Add-Ons to your Canaro hub - either wired directly or wirelessly **from up to 10km away**.

The options to expand are *near-limitless*.

Expand your monitoring capabilities through our robust Add-On offerings.

Some Add-Ons have built-in sensors, such as the Environment Add-On that monitors humidity and temperature.

Others are more like adapters. They connect to off-the-shelf sensors and systems - like our 4-20mA Add-On, Modbus Add-On and Dry Contact & Relay Add-On.

Featured Example: Leak Sensor Add-On

Wireless water leak detection that alerts you the moment moisture is detected. Perfect for anywhere water damage is a concern.

- Up to 10km range to main device
- 24-month battery life (AA batteries, battery health view available on dashboard)
- Works with leak cables
- Instant leak detection alerts
- No additional subscription

The Platform

REAL-TIME DASHBOARD

Mobile, tablet & desktop. Monitor all your devices at a glance.

DATA INTELLIGENCE

AI-powered anomaly detection, predictive analytics, and natural language queries.

PROACTIVE ALERTS

SMS, email, and voice call notifications. Threshold, predictive, and change-based.

API & INTEGRATIONS

RESTful API, webhooks, and integrations with the tools you already use.

From the ground up.

We don't just sell Canaro - we're the people that brought it to life. When you work with us, you're not going through layers of distributors and installers - you're working directly with the people who know the system best.
